

The Arrestor®

U.S. STATE DEPARTMENT
**CRASH-TEST
PROVEN**
CERTIFIED

Installed across a roadway or vehicle entry point, The Arrestor® can be easily and quickly closed or opened to regulate access.

In the closed position, it will stop and destroy a vehicle that attempts to breach the barrier. In the open position, the barrier is flush with the road and allows smooth vehicle passage.

VEHICLE ACCESS CONTROL BARRIERS

Maximum stopping power

- Stops a 15,000-pound truck traveling at 50 mph; K12 rated
Equivalent to 1.2 million foot-pounds of kinetic energy
- Emergency up function raises barrier within two seconds
- Can span multiple traffic lanes

Aesthetic design

- Choose from over 250 colors or a digital imaging finish that simulates granite, marble, polished steel or other building materials
- Incorporate logos, graphics or text
- "Floats" above the roadway with no permanent above-ground side supports
- Flush with road surface when lowered for vehicle passage
- Always up or only up when threat conditions warrant

Advanced materials

- Energy-absorbing band technology
Multiple high-strength energy absorbing bands housed within a galvanized steel shell
- Upgradeable increase stopping power with replaceable components
- Repairable quick and easy replacement if struck, without excavation of the substructure

PRO Barrier Engineering LLC is a Pennsylvania-based company that designs and builds anti-terrorism vehicle barriers and provides related perimeter security services, such as perimeter security audits, training, and documentation. Our business niche is high stopping power barriers employing advanced materials and aesthetic designs.

We serve the government, military, educational and commercial sectors. We work directly with end users, as well as engineering and construction firms, security service companies, architects, landscape architects, real estate management companies, and others. We have over a decade of working behind the scenes designing barriers for some of the world's largest perimeter security companies. Our barrier designs are installed around the world.

PRO Barrier Engineering's products address the ever-growing need for more cost-effective and aesthetic devices to protect people and facilities from vehicle-based terrorist attack. You can turn to us for a range of perimeter security solutions, including our:

- Arrestor barrier, which uses energy-absorbing bands—not massive steel structures—to achieve the U.S. State Department's highest barrier rating
- Simple and upgradeable B³ system (pronounced "B-Cube" for Basic Bollard Barrier) that evolves as your security needs change
- Electrically operated vertical pivot beam barriers
- Ultra-wide barriers that span multiple traffic lanes, yet deliver high stopping power
- Copyrighted Vehicle Barrier Seminar to educate security professionals and end users on all aspects of vehicle barriers, including selection, certification, cost, installation, and maintenance
- Custom barrier design and fabrication to address your particular vehicle access control and perimeter security requirements
