

B³

The B³® is an economical yet aesthetic perimeter security system that can be installed in phases as your budget or security requirements evolve.

A maintenance free manual system, the bollards can be easily removed for occasional vehicle access.

The B-Cube[®]

BASIC BOLLARD BARRIER

The B³ consists of four components:

- In-Ground Socket
- Bollard
- Cover Plate
- Trim Ring

Simple, Upgradeable Perimeter Security

- Standard in-ground **socket** into which a bollard is inserted
- An interchangeable family of steel **bollards** with different vehicle stopping powers

B³ Applications

- Perimeter security requirements may change
Upgrade the bollard stopping power while reusing the in-ground socket (no excavation required).
- Limited budget
Install sockets now, purchase bollards later.
- Maintain open and welcoming appearance
Install sockets and cover plates. Keep bollards in storage and install them when threat conditions warrant.
- Occasional vehicle access
Manually remove bollards when needed; don't pay for retractable bollards.
- Aesthetics are important
Eight standard colors, or select any custom color; or use our digital finish option to mimic marble, granite, or any architectural material.
- No maintenance headaches
B³ system requires no maintenance. If bollard is damaged, lift it out for repair or replacement.

PRO Barrier Engineering LLC is a Pennsylvania-based company that designs and builds anti-terrorism vehicle barriers and provides related perimeter security services, such as perimeter security audits, training, and documentation. Our business niche is high stopping power barriers employing advanced materials and aesthetic designs.

We serve the government, military, educational and commercial sectors. We work directly with end users, as well as engineering and construction firms, security service companies, architects, landscape architects, real estate management companies, and others. We have over a decade of working behind the scenes designing barriers for some of the world's largest perimeter security companies. Our barrier designs are installed around the world.

PRO Barrier Engineering's products address the ever-growing need for more cost-effective and aesthetic devices to protect people and facilities from vehicle-based terrorist attack. You can turn to us for a range of perimeter security solutions, including our:

- Arrestor barrier, which uses energy-absorbing bands—not massive steel structures—to achieve the U.S. State Department's highest barrier rating
- Simple and upgradeable B³ system (pronounced "B-Cube" for Basic Bollard Barrier) that evolves as your security needs change
- Electrically operated vertical pivot beam barriers
- Ultra-wide barriers that span multiple traffic lanes, yet deliver high stopping power
- Copyrighted Vehicle Barrier Seminar to educate security professionals and end users on all aspects of vehicle barriers, including selection, certification, cost, installation, and maintenance
- Custom barrier design and fabrication to address your particular vehicle access control and perimeter security requirements
